### Introduction

Tangerine Software is pleased to announce the availability of Nectari Version 6.3. This is a significant new release that not only provides more features but also delivers many enhancements and function requested by customers.

### New Features

#### ▪ **Web Process Designer**

A new web based Nectari Process Designer is available in V6.3 and contains several advanced features which include the following:

- Formatting fields is easier to do and new formats for date and currency fields are available.
- A new summary option "Count Distinct" can be used to simplify data analysis.
- A user can preview and verify table data at any time throughout the development of a process.

#### ▪ **Excel Add-in Lists are Now Dynamic!**

Lists within the Excel Add-in can be dynamic in V6.3. For example, newly created GL accounts will appear automatically within Excel Add-in financial statements. A dynamic list can be multi-level, for instance; department by G/L account.

#### ▪ **Excel Add-in Data Extraction Feature**

A new data extraction feature will further facilitate real-time access to data from within the Excel Add-in. Choose the Nectari process from which you would like to access data, select the columns and filter. The data being extracted is dynamic. For example, financial reports distributed monthly will contain the current month's transactional detail.

#### ▪ **Excel Add-in Sheet Duplicator**

The new duplicator feature simplifies report building in the Excel Add-in by allowing the user to duplicate a report based on a selected dimension. For example; the same report can be recreated automatically for each respective department within a company.

---

- **Globally Defined Application Links**

Application links are defined globally in V6.3. Once a new link has been defined it will be available in all Nectari processes.

- **Automated Navigation Links**

Navigation links are automated, making the need to define these links obsolete. The list of suggested navigation links will be based on the value that has been selected by the user.

- **Redesigned Environment and Data Source features**

Environment and data source management features have been redesigned to create a better user experience.

- **Nectari Mobile Enhancements**

Changes have been made to the Nectari Mobile user interface, improving the navigation experience for all users. A number of functional enhancements have been made, including; row totals on all drill-down levels, advanced column width calculations, and filters can now be accessed in the Mobile command center.
